

Decorium: Проектирование AI-Driven системы дизайнерских оценок для таймкиллер-игры

Концепция, Жанр и Целевая Аудитория

Игра «Decorium» представляет собой 3D-таймкиллер для платформ ПК и мобильных устройств, основанный на принципах расслабляющего дизайна и пространственного мышления [193](#). В отличие от большинства игр в жанре, где акцент делается на быстром реагировании или сложной механике, «Decorium» предлагает игроку уникальный опыт творчества и анализа через количественную оценку соответствия созданного интерьера заданному стилю и эргономическим нормам. Ключевое обещание игры — это сочетание творческой свободы с глубокой, но интуитивно понятной системой обратной связи, которая обучает игрока нюансам дизайна интерьеров. Целевая аудитория включает в себя как поклонников головоломок и пазлов, так и людей, увлеченных дизайном интерьеров, например, игроков таких игр, как «Small Spaces» [1416](#) и «Redecor» [724](#), а также любителей кооперативных и творческих игр [726058](#). Игра создана для коротких игровых сессий продолжительностью 2–5 минут, что идеально подходит для перерывов в работе или учебе [193](#).

Жанр «Decorium» можно классифицировать как «Таймкиллер с элементами дизайн-симулятора». Это не полноценный симулятор, подобный «House Flipper» [148311](#), где требуется ремонтировать стены и менять коммуникации [674](#), а скорее «умная песочница», сфокусированная на расстановке уже имеющихся предметов. Игровой процесс строится вокруг решения задачи оптимизации: необходимо расположить набор предметов в ограниченном пространстве таким образом, чтобы максимизировать балл за стиль и эргономику. Этот подход сближает игру с такими жанрами, как пространственные головоломки [255256](#) и пазлы на заполнение сетки [517](#), однако она добавляет в них уникальный слой креативности и эстетической оценки. Важным отличием является отсутствие временных ограничений, которые часто присущи гиперкасальным играм [1162](#), что позволяет игроку сосредоточиться на качестве композиции, а не на скорости

действий [381](#). Ключевые слова, определяющие концепцию, — «уют», «творчество», «стиль», «гармония» и «расслабление» [193](#), что формирует спокойный и позитивный игровой тон.

Технологическое ядро игры — это многомерная система оценки, основанная на векторных представлениях предметов и линейных ограничениях [1154155](#). Каждый предмет декора представляется как точка в многомерном пространстве, где каждая ось соответствует определенному признаку: цвету, материалу, геометрии, стилю и другим характеристикам [11511](#). После того как игрок разместил предметы в комнате, система вычисляет средний вектор этой комнаты. Для каждого стиля задается набор линейных неравенств (например, $a_i \cdot V_{\text{комнаты}} \leq b_i$), которые математически описывают требования к данному стилю [126](#). Например, для скандинавского стиля может требоваться высокая доля натуральных материалов ($\text{Сумма_материалов_природных} \geq 0.7$) и наличие предметов светлых тонов ($\text{Доля_светлых_цветов} \geq 0.6$). Итоговая оценка стиля вычисляется не бинарно (выполнено/не выполнено), а плавно, с использованием штрафной функции, которая учитывает величину нарушения каждого ограничения [98](#). Это позволяет получить более детализированную и справедливую оценку, чем простой подсчет совпавших тегов.

Отдельной, но не менее важной системой является оценка эргономики и пространственной организации. Она проверяет, насколько функционально и удобно организовано пространство. Здесь также используются линейные ограничения, но уже относящиеся к геометрическим параметрам расположения предметов: наличие достаточных проходов между мебелью (не менее 36-40 дюймов) [768769](#), правильное соотношение размеров предметов (например, высота кофейного столика должна быть ниже или равна высоте сиденья дивана) [860](#), отсутствие блокировки окон и дверей, а также баланс визуального веса в комнате [597](#). Эти два показателя (стиль и эргономика) взвешенно суммируются для получения итогового рейтинга в виде звезд (от 1 до 5), что обеспечивает комплексную оценку качества дизайна [1154](#). Такой подход, сочетающий эстетическую и функциональную оценку, является редкостью в игровой индустрии и создает уникальное торговое предложение для «Decorium».

В следующей таблице представлена сводная информация по ключевым параметрам концепции игры.

Параметр	Описание	Источник/Обоснование
Название	Decorium	Запрос пользователя
Платформы	ПК, iOS, Android	Запрос пользователя
Жанр	Таймкиллер, дизайн-симулятор, пространственная головоломка	Анализ конкурентов («Small Spaces» ¹⁴¹⁶ , «Redecor» ⁷²⁴) и механик («Chock-a-Block» ⁵¹⁷)
Целевая аудитория	Любители головоломок, дизайнерские игры; пользователи 12-45 лет	Анализ рынка («Design Home» ⁷²⁸ , «Animal Crossing» ¹²¹⁹)
Продолжительность сессии	2–5 минут	Запрос пользователя, стандарт для таймкиллеров ³⁷⁹
Ключевые слова	Уют, творчество, стиль, гармония, расслабление	Запрос пользователя
Технологическое ядро	Векторная модель, линейные ограничения, штрафная функция	Запрос пользователя, научные работы ²⁴⁵²⁶³
Система оценки	Комплексная: стиль + эргономика	Запрос пользователя, лучшие практики дизайна ⁷⁰¹⁸⁵⁵
Формат оценки	Плавная (штрафная функция), а не бинарная	Запрос пользователя, преимущество перед простыми системами ⁹⁸

Таким образом, «Decorium» позиционируется как интеллектуальная и успокаивающая игра, которая использует передовые методы машинного обучения для создания глубокой и образовательной игровой механики. В то время как другие игры предлагают лишь внешнюю красоту, «Decorium» предоставляет игроку инструментарий для понимания и применения законов дизайна, делая процесс игры одновременно увлекательным и полезным.

Ядро Геймплея и Игрок-Цикл

Ядро игрового процесса «Decorium» строится вокруг повторяемой последовательности действий, которую можно описать как трехэтапный игровой цикл: Расстановка, Аналитическая оценка и Обратная связь. Этот цикл является основой для всех игровых сессий и полностью соответствует концепции таймкиллера, предлагая быстрый и понятный поток взаимодействия²⁵². Игровая сессия начинается с выбора уровня (задания) из главного меню. Каждый уровень представляет собой конкретный заказ от клиента: необходимо оформить определенную комнату (например, гостиную или спальню) в соответствии с заданным стилем и бюджетом. После выбора уровня игрок

попадает в игровой экран, который состоит из двух основных частей: инвентаря с доступными предметами с одной стороны и 3D-вида комнаты — с другой. Цель игрока — переместить, повернуть и разместить предметы из инвентаря в комнате, чтобы достичь максимально возможного рейтинга (звезд).

Первый этап, Расстановка, является самым длительным и творческим. Игрок выбирает предмет из инвентаря (обычно кликом мыши или тапом на экране) и затем перемещает его курсором в пределах комнаты. При этом система может реализовывать режим "прилипания" к сетке или к поверхностям пола, что облегчает точное позиционирование [197556](#). Вращение предмета происходит либо с помощью специальных кнопок, либо путем удержания кнопки мыши и движения курсора, либо с помощью жестов на сенсорном экране (например, поворот двумя пальцами) [286289](#). На этом этапе игрок экспериментирует с композицией, пробуя различные варианты расположения мебели, сочетания цветов и материалов. Важно, что все действия происходят в реальном времени, и игрок может видеть изменения в окружении сразу после каждого размещения или перемещения предмета. Эта свобода творчества является ключевым элементом удовольствия от игры. Для удобства игрока могут быть предусмотрены функции, такие как копирование стиля с одного объекта на другой (по аналогии с «House Flipper 2» [756](#)), что значительно ускоряет процесс декорирования.

Второй этап, Аналитическая оценка, запускается автоматически, когда игрок завершает расстановку и подтверждает свой вариант (например, нажимая кнопку "Завершить"). На этом этапе происходит расчет итоговых баллов за стиль и эргономику. Система выполняет всю необходимую математическую работу в фоновом режиме, и игрок не видит самих формул или числовых значений. Однако система визуализирует результаты своей работы, предоставляя игроку ценную информацию для понимания своих ошибок и успехов. Этот процесс можно разделить на два подэтапа: оценка стиля и оценка эргономики. Для оценки стиля система вычисляет средний вектор комнаты на основе размещенных предметов и сравнивает его с вектором, соответствующим заданному стилю, используя заранее определенные линейные ограничения [1154](#). Для оценки эргономики система проверяет соблюдение пространственных правил: наличие проходов, баланс предметов, соответствие масштабов [276855](#). Весь этот процесс занимает несколько секунд и служит переходом от творческого этапа к аналитическому.

Третий и заключительный этап — Обратная связь. Здесь игрок получает награду за свои усилия и, что более важно, получает образовательную информацию о том, насколько успешно он решил задачу. Обратная связь подается на нескольких уровнях, что соответствует запросу на баланс между интуитивностью и сложностью ¹¹⁵⁴ Во-первых, игрок видит итоговый рейтинг в виде звезд (от 1 до 5). Шкала четко определена: 1 (<0.4), 2 (0.4–0.55), 3 (0.56–0.70), 4 (0.71–0.85), 5 (0.86–1.0) ¹¹⁵⁴ Это самый общий уровень оценки. Во-вторых, система отображает лепестковую диаграмму, которая наглядно демонстрирует суб-оценки по различным категориям (например, "Цвет", "Материалы", "Геометрия", "Структура") ¹¹⁵⁴ Если какой-либо "лепесток" имеет низкую оценку, это немедленно привлекает внимание игрока и указывает на проблемную область. В-третьих, система предоставляет вербальную обратную связь в виде комментариев от "клиента". Эти комментарии конкретизируют проблемы, выявленные на этапе анализа. Например, если в комнате недостаточно дерева, клиент может сказать: "Мне не хватает натуральных материалов, добавьте деревянную мебель". Если проход слишком узкий, он может заметить: "Этот проход слишком узкий, нужно больше места для прохода". Эта многоуровневая система обратной связи позволяет игроку не просто получить оценку, а понять, почему* она такая, и какие именно шаги следует предпринять для улучшения будущих результатов. Таким образом, каждый цикл игры не только вознаграждает игрока, но и делает его немного лучше в искусстве дизайна.

В следующей таблице представлено детальное описание игрового цикла.

Этап	Действие игрока	Реакция системы	Цель этапа
1. Расстановка	Выбор предмета, перемещение, вращение, размещение в комнате.	Предмет отображается в 3D-пространстве. Возможна подсветка нарушений ограничений в реальном времени.	Творческое решение задачи по компоновке интерьера.
2. Аналитическая оценка	Подтверждение собранного варианта (например, нажатием кнопки).	Фоновый расчет баллов за стиль и эргономику с использованием векторных моделей и штрафных функций.	Объективная количественная оценка соответствия заданию.
3. Обратная связь	Просмотр итоговых звезд, лепестковой диаграммы и комментариев клиента.	Отображение итогового рейтинга, визуализация суб-оценок, вывод текстовых сообщений.	Информирование игрока о результатах и предоставление рекомендаций по улучшению.

Этот цикл является центральным для всей игры. Его эффективность зависит от того, насколько плавно и интуитивно система переходит от этапа к этапу. Первоначальные уровни должны быть максимально простыми, чтобы игрок мог освоить базовые механики без стресса. По мере продвижения по игре

количество доступных предметов, сложность стилей и требования к эргономике будут увеличиваться, усложняя задачу. Прогрессия будет осуществляться за счет открытия нового контента: новых предметов, стилей, комнат и, что особенно важно, новых клиентов с уникальными и все более сложными требованиями [591592](#). Таким образом, игровой цикл не просто повторяется, а развивается вместе с игроком, постоянно предлагая ему новые вызовы и возможности для обучения.

Система Предметов и Векторная Модель

Центральным элементом игровой механики «Decorium» является система предметов, которая строится на основе многомерной векторной модели. Каждый предмет декора, будь то диван, стол или картина, описывается не просто графически, а как точка в абстрактном пространстве, где каждая ось соответствует определенному измерению — признаку [1154155](#). Полное и точное описание этих признаков является критически важным для корректной работы всей системы оценки. На основе предоставленных материалов и лучших практик в области машинного обучения и проектирования продуктов можно составить подробный список признаков, входящих в вектор предмета. Этот список должен быть достаточно широким (минимум 15–20 признаков) и охватывать все аспекты, влияющие на восприятие интерьера [1 1511](#).

Признаки можно сгруппировать по смысловым категориям: 1. Цвет: Включает в себя доминирующие цветовые категории (например, "Теплые", "Холодные", "Нейтральные"), а также нормализованные значения по цветовым моделям RGB или Lab*. Это позволяет системе оценивать не только наличие определенных цветов, но и общую тональность и гармонию палитры [45](#). 2. Материалы: Этот признак описывает состав предмета. Он может быть представлен несколькими подпризнаками, показывающими долю различных материалов (дерево, металл, стекло, кожа, текстиль, пластик) [317](#). Также можно использовать кодирование типа "One-hot" для категорий материалов, что является распространенной техникой в машинном обучении [585](#). 3. Геометрия: Характеризует форму и пропорции предмета. Ключевые подпризнаки здесь — это отношение высоты к ширине и глубине, а также количественные характеристики форм (например, "Количество острых углов", "Преобладание округлых форм"). 4. Стилиевые Теги: Предмет может принадлежать к нескольким стилям одновременно (например,

"Модерн" и "Баварский"). Эти теги позволяют группировать ограничения и являются основой для иерархической структуры стилей [315](#). 5. Размер и Цена: Нормализованные значения объема и стоимости предмета. Размер важен для соблюдения масштаба в комнате, а цена — для контроля над бюджетом, который также является частью некоторых заданий [59](#). 6. Функциональность: Категоризирует предмет по его назначению (например, "Освещение", "Хранение", "Зонирование", "Сидение", "Коммуникация") [716](#). Это помогает системе оценивать функциональную целостность пространства. 7. Эмоциональный отклик: Этот признак, основанный на исследованиях в области эмоционального дизайна [244](#), может включать такие характеристики, как "Динамичность", "Стабильность", "Сложность", "Простота". Хотя он сложнее в аннотации, он позволяет создавать более тонкие и эмоционально окрашенные стили.

Все эти признаки должны быть нормализованы в диапазоне от 0 до 1 (или от -1 до 1). Нормализация — это процесс масштабирования значений, чтобы они имели одинаковый диапазон, что критически важно для того, чтобы ни один признак (например, цена в долларах) не доминировал над другими (например, процентом дерева) из-за своей абсолютной величины [1](#) [4](#). Наиболее распространенным методом является минимаксная нормализация: $V_{norm} = (V - V_{min}) / (V_{max} - V_{min})$, где V — исходное значение, а V_{min} и V_{max} — минимальное и максимальное значения этого признака во всем пуле предметов [396](#). Это гарантирует, что все признаки вносят равный вклад в итоговое векторное представление.

Для управления этим большим количеством данных используется структура данных, похожая на JSON-объект, которая описывает каждый предмет. Ниже представлена примерная структура такой структуры данных.

Поле	Тип данных	Описание	Пример
id	Целое число	Уникальный идентификатор предмета.	101
name	Строка	Название предмета.	"Скандинавский диван"
model_path	Строка	Путь к 3D-модели в проекте.	"Models/Armchair_A.fbx"
dimensions	Объект	Размеры предмета в единицах мира.	{x: 2.0, y: 0.8, z: 1.5}
price	Число	Цена предмета.	150
tags	Массив строк	Массив стилевых и функциональных тегов.	["скандинавский", "диван", "сидение", "модерн"]
features_vector	Массив чисел	Нормализованный вектор признаков.	[0.8, 0.1, 0.9, 0.75, ...]

Для реализации системы необходимо подготовить большой пул предметов (≥ 30). Для каждого из них необходимо вручную или с помощью полуавтоматических инструментов (например, ИИ-классификаторов [1283](#)) заполнить поля вектора признаков. Этот процесс, известный как **feature engineering** (инженерия признаков), является одним из самых трудоемких, но и самых важных этапов разработки [3 390](#). Качество всей системы оценки напрямую зависит от точности и полноты этих данных. Можно использовать существующие наборы 3D-моделей, такие как Next-gen Furniture Pack [862](#) или Low Furniture Pack [864](#), как отправную точку, дополняя их своими данными о признаках.

После того как все предметы описаны, система вычисляет вектор комнаты. Это делается путем простого вычисления среднего арифметического векторов всех размещённых в комнате предметов. Если в комнате есть предметы с векторами $V_1, V_2, \dots, V_n$, то вектор комнаты V_{room} будет равен:

$$V_{room} = \frac{1}{n} \sum_{i=1}^n V_i$$

Эту формулу можно усложнить, введя веса. Например, можно уделить больший вес предметам, занимающим большую площадь, или предметам, которые находятся в центре внимания [1154](#). Этот средний вектор и становится основой для дальнейшей аналитической оценки. Он представляет собой математическое воплощение "духа" помещения, созданного игроком.

В следующей таблице приведен пример заполнения вектора признаков для нескольких предметов.

ID	Название	Доля_дерева	Доля_металла	Теплота_палитры	Простота_формы	Теги
101	Скандинавский диван	0.9	0.1	0.8	0.9	[скандинавский, диван, мебель]
102	Металлическая лампа	0.0	0.8	0.6	0.7	[лофт, освещение, лампа]
103	Круглая ваза	0.2	0.3	0.5	0.9	[декор, ваза, круглая]
104	Классический бюро	0.95	0.05	0.4	0.5	[классический, офис, мебель]

Таким образом, создание и управление векторной моделью предметов — это фундаментальный технологический процесс, который лежит в основе уникальной игровой механики «Decorium». Он требует тщательной подготовки данных, но в результате позволяет реализовать сложную, но логичную и объективную систему оценки, которая является главным конкурентным преимуществом игры.

Система Оценки Стиля и Эргономики

Система оценки в «Decorium» является сердцем игрового процесса, состоящим из двух независимых, но взаимодополняющих модулей: оценки по стилю и оценки по эргономике. Оба модуля работают по единому принципу — проверке выполнения линейных ограничений и расчету плавного балла с использованием штрафной функции. Итоговый результат представляет собой взвешенную сумму двух компонент: $\text{score_итоговый} = 0.7 \cdot \text{score_стиль} + 0.3 \cdot \text{score_эргономика}$ ¹¹⁵⁴ Коэффициенты 0.7 и 0.3 отражают приоритет эстетической гармонии над чисто функциональной организацией пространства, но подчеркивают важность обоих аспектов.

Система оценки по стилю работает с вектором комнаты, который был вычислен как среднее арифметическое векторов всех размещенных предметов¹¹⁵⁴ Для каждого из заданных стилей (например, скандинавский, лофт, модерн) существует набор из десяти или более линейных ограничений. Каждое ограничение имеет вид $a_i \cdot V_{\text{комнаты}} \leq b_i$ (или с операторами $\geq$, $=$). Здесь a_i — это вектор весов, соответствующий ограничению, а b_i — пороговое

значение. Например, для стиля "Скандинавский" одно из ограничений может быть: $(0, 0.9, 0, 0, \dots) \cdot V_{\text{комнаты}} \geq 0.6$. Это означает, что скалярное произведение вектора весов (где вес 0.9 соответствует признаку "Доля_дерева") с вектором комнаты должно быть не меньше 0.6. Другое ограничение может касаться цвета: $(0.7, 0, -0.7, 0, \dots) \cdot V_{\text{комнаты}} \leq 0.4$, что переводится как "отношение теплых цветов к холодным не должно превышать определенный порог".

Алгоритм расчета $score_{\text{стиль}}$ следующий: 1. Для каждого из N ограничений i от 1 до N вычисляется величина нарушения (штраф).

- Если ограничение выполняется ($a_i \cdot V_{\text{комнаты}} \leq b_i$), штраф $penalty_i = 0$.
- Если ограничение нарушено, штраф $penalty_i$ может быть рассчитан как разница между текущим значением и порогом, возможно, с нормализацией. Например, $penalty_i = \max(0, (a_i \cdot V_{\text{комнаты}}) - b_i)$.

1. Суммируются все штрафы: $totalpenalty = \sum_{i=1}^N penalty_i$.
2. Итоговый балл за стиль вычисляется с помощью плавной штрафной функции, чтобы избежать резких скачков оценки. Одним из хороших кандидатов является экспоненциальная функция, похожая на сигмоиду, которая хорошо подходит для моделирования прогресса в играх [98 436](#):

$$score_{\text{стиль}} = e^{-\lambda \cdot totalpenalty}$$

где λ — это коэффициент, регулирующий "крутость" кривой снижения оценки. При малых значениях штрафа (комната почти идеальна) оценка будет близка к 1. При больших штрафах (много нарушений) оценка будет стремиться к 0.

Система оценки эргономики работает совершенно по-другому, но по той же логике. Она не анализирует векторы признаков, а проверяет геометрические и пространственные отношения между предметами. Эти проверки также формулируются как линейные или легко аппроксимируемые ими ограничения.

Критерий эргономики	Ограничение	Пример расчета
Проходимость	Минимальное расстояние между центрами объектов > минимально допустимое.	Для прохода 90 см: <code>distance(obj1.center, obj2.center) > 0.9m</code> . Нарушение: <code>penalty = distance - 0.9m</code> .
Баланс визуального веса	Дисперсия площадей, занимаемых предметами в каждой ячейке сетки, < максимальной.	Разделить комнату на сетку 3x3. Посчитать площадь, занятую предметами в каждой ячейке. Если дисперсия > порога, начислить штраф.
Масштаб и соотношение	Соотношение высот/ширин предметов находится в допустимом диапазоне.	Для кофейного столика и дивана: <code>abs(height_table - height_sofa) < 0.1m</code> . Нарушение: <code>penalty = abs(...)</code>
Доступ к элементам	Расстояние от предмета до окна/двери > минимально допустимого.	<code>distance(object.center, window.center) > 0.5m</code> . Нарушение: <code>penalty = distance - 0.5m</code> .

Как и в случае со стилем, система эргономики суммирует все штрафы и применяет к ним ту же экспоненциальную функцию, чтобы получить `score_эргономика`.

В следующей таблице приведены примеры ограничений для нескольких стилей, которые будут использоваться в процедурно генерируемых уровнях.

Стиль	Признак	Оператор	Порог (b_i)	Группа
Скандинавский	Доля_дерева	>=	0.6	Материалы
	Доля_белого_цвета	>=	0.5	Цвет
	Доля_прямоугольных_форм	>=	0.7	Геометрия
	Тёплые_оттенки_преобладают	==	1	Цвет
Лофт	Доля_металла	>=	0.5	Материалы
	Доля_серого_цвета	>=	0.4	Цвет
	Доля_сырой_текстуры	>=	0.3	Материалы
	Простота_формы	<=	0.4	Геометрия
Модерн	Доля_стекла	>=	0.4	Материалы
	Преобладание_прямых_линий	>=	0.8	Геометрия
	Монотонность_палитры	>=	0.7	Цвет
	Тёмные_тона	<=	0.3	Цвет

Псевдокод для расчета итоговой оценки:

```
def calculate_room_score(room_vector, ergonomic_penalties, style_constraints):
    # Расчет балла за стиль
    total_style_penalty = 0
```

```

for constraint in style_constraints:
    value = dot_product(constraint.weights, room_vector)
    if constraint.operator == "<=" and value > constraint.threshold:
        total_style_penalty += value - constraint.threshold
    elif constraint.operator == ">=" and value < constraint.threshold:
        total_style_penalty += constraint.threshold - value
    # ... другие операторы
score_style = exp(-lambda_param * total_style_penalty)

# Расчет балла за эргономику (предполагается, что он уже получен)
# ergonomic_penalty - это сумма всех штрафов за эргономику
score_ergonomics = exp(-lambda_param * ergonomic_penalties)

# Взвешенная сумма
total_score = 0.7 <em> score_style + 0.3 </em> score_ergonomics

return total_score, score_style, score_ergonomics

```

Этот подход обеспечивает высокую степень детализации и объективности. Он позволяет дизайнерам точно контролировать, какие именно атрибуты важны для каждого стиля, и как сильно нарушение того или иного правила влияет на итоговый результат. Плавный характер оценки, достигаемый благодаря экспоненциальной функции, делает игровой процесс более приятным, поскольку игрок всегда видит, что его усилия по исправлению ошибок вознаграждаются, даже если он не смог достичь идеального результата с первого раза.

Система Обратной Связи и Управление

Эффективная система обратной связи и интуитивно понятное управление являются критически важными для достижения ключевой цели игры — создания расслабляющего и образовательного опыта без лишнего стресса [193](#). В «Decorium» эти две системы тесно связаны и направлены на то, чтобы помочь игроку не просто получить оценку, а понять, почему она такая, и как ее улучшить. Система обратной связи строится на трех уровнях: немедленная визуальная подсказка, аналитическая диаграмма и интерактивные комментарии от «клиента».

Немедленная визуальная обратная связь активируется в реальном времени, когда игрок взаимодействует с предметами. Как только игрок наводит курсор на предмет или помещает его в комнату, система мгновенно проверяет, какие именно ограничения нарушает или выполняет этот предмет. Если ограничение нарушается, предмет подсвечивается определенным цветом (например, красным для серьезных нарушений, желтым для предупреждений). Если ограничение выполняется, предмет может подсвечиваться зеленым цветом. Эта подсветка может быть дополнена небольшими иконками рядом с предметом, указывающими на тип проблемы (например, иконка дерева для нарушения требования к материалам). Такой подход, основанный на немедленной обратной связи, является стандартом де-факто в современных играх и помогает игроку быстро учиться на своих ошибках ¹¹⁰⁸. Кроме того, изменение освещения в комнате (например, становление более холодным или тусклым) при наличии серьезных нарушений может служить дополнительным, несловесным сигналом ¹⁸⁶.

Аналитическая диаграмма появляется после завершения расстановки. Лепестковая диаграмма (radar chart) наглядно представляет суб-оценки по четырем основным группам: «Цвет», «Материалы», «Геометрия» и «Структура» (или «Эргономика») ¹¹⁵⁴. Каждый "лепесток" соответствует одной из групп. Если оценка по группе низкая, соответствующий лепесток будет "втянут" внутрь, а если высокая — "вытянут" наружу. Это позволяет игроку мгновенно визуальное определить, в какой области он наиболее успешен, а в какой допустил наибольшие ошибки. Например, если лепесток «Материалы» имеет низкую оценку, игрок понимает, что ему следует обратить внимание на сочетание тканей и отделочных материалов. Эта визуализация данных, основанная на принципах UX/UI дизайна, превращает сложную математическую информацию в понятный и интуитивно понятный образ ¹⁸².

Интерактивные комментарии от «клиента» являются наиболее человечной и образовательной частью обратной связи. После просмотра итоговой оценки и диаграммы, игрок слышит голос за кадром (или видит текстовое сообщение), в котором «клиент» комментирует результат. Эти комментарии не являются случайными; они генерируются на основе анализа конкретных нарушений, выявленных системой. Например, если в комнате было нарушено ограничение по проходимости, клиент может сказать: "Этот проход совсем неудобный, его нужно сделать хотя бы на 40 дюймов шире". Если была нарушена цветовая гамма, он может заметить: "Мне кажется, эта яркая красная подушка слишком

сильно выбивается из общего плана. Может, стоит заменить ее на более нейтральную?".

Этот подход основан на принципах эффективной обратной связи, где важно давать конкретные, а не расплывчатые советы [185187](#). Вместо фразы "Это выглядит плохо" система говорит: "Вы нарушили правило 3.2: 'соотношение высот кофейного столика и дивана'". Это делает обучение более продуктивным. В следующей таблице приведен пример списка из 30+ таких комментариев, сгруппированных по категориям.

Категория	Комментарий
Цвет	Слишком много ярких цветов, добавьте нейтральных тонов.
Цвет	Ваша палитра слишком монотонная, попробуйте добавить акцентные цвета.
Цвет	Мне кажется, эти два цвета между собой не согласуются.
Цвет	Цветовая палитра слишком холодная, попробуйте теплые оттенки.
Материалы	В комнате не хватает натуральных материалов, добавьте деревянную мебель.
Материалы	Слишком много металла, сделайте пространство более уютным.
Материалы	Материалы кажутся несовместимыми. Кожа и пластик в одном интерьере — рискованно.
Геометрия	Преобладают слишком острые углы, комната должна быть более мягкой.
Геометрия	Очень много круглых форм, это создает ощущение хаоса.
Геометрия	Предметы имеют разный масштаб, они не кажутся частью одной системы.
Эргономика	Этот проход слишком узкий, нужно больше места для прохода.
Эргономика	Мебель плотно прижата ко всем стенам, комната должна «дышать».
Эргономика	Вы заблокировали доступ к окну, это недопустимо.
Структура	Комнату не хватает центра тяжести, поставьте крупный предмет в центр.
Структура	Вся мебель сгруппирована в одном углу, комната выглядит незавершенной.
Структура	Не хватает зонирования, пространство выглядит плоским.
Цвет	Почему здесь нет моего любимого цвета? Добавьте хоть капельку синего!
Материалы	Я просил избегать пластика, а здесь он везде.
Геометрия	Все предметы одинаковой формы, это скучно.
Эргономика	Я не смогу в этой комнате ни сесть, ни встать.
Структура	Это выглядит как магазин, а не как дом. Не хватает личных вещей.
Цвет	Слишком темно, добавьте источники света или более светлые тона.
Материалы	Дерево должно быть натуральным, а не имитацией.
Геометрия	Слишком много мелких предметов, комната должна иметь крупные акценты.
Эргономика	Проход прямо к двери заблокирован.
Структура	Не хватает баланса, одна сторона комнаты слишком загружена.
Цвет	Мне не нравится этот оттенок красного, он слишком оранжевый.
Материалы	Слишком много стекла, комната должна быть безопасной.
Геометрия	Острые углы в детской опасны.
Эргономика	Невозможно пройти к телевизору.
Структура	Мне кажется, вам стоит начать с планировки, а не с мебели.
Цвет	Цвета должны «цвести» друг из друга, а не конкурировать.

Категория	Комментарий
Материалы	Металл и текстиль могут сочетаться, но не так, как здесь.
Геометрия	Прямоугольные предметы должны соседствовать с круглыми для баланса.
Эргономика	Мебель мешает открывать дверцу шкафа.
Структура	В комнате нет точки фокуса.

Система управления должна быть адаптирована для обеих платформ — ПК и мобильных устройств, обеспечивая бесшовный перенос опыта [117](#). На ПК управление будет традиционным: левый клик мыши для выбора и размещения, правый клик или колесо прокрутки для вращения, и перетаскивание для перемещения камеры. На мобильных устройствах потребуется более продуманный подход. Выбор предмета осуществляется тапом по иконке в инвентаре. Перемещение и вращение реализуются с помощью жестов: свайп для перемещения объекта вперед-назад и влево-вправо, а поворот двумя пальцами для вращения. Важно учесть эргономику использования смартфона одной рукой, размещая основные элементы управления (кнопки вращения, подтверждения) в "зоне большого пальца" [280719](#). Также необходимо реализовать "прилипание" (snapping) как к сетке, так и к поверхностям, что является стандартом для таких приложений [197202](#). Это можно реализовать с помощью лучей в Unity, которые определяют точку контакта с поверхностью, куда игрок хочет поместить объект [555560](#). Такой подход к управлению и обратной связи обеспечивает, чтобы сложная математическая система в фоне была полностью скрыта от игрока, предоставляя ему только простой, интуитивно понятный и информативный интерфейс для творчества.

Прогрессия, Уровневый Дизайн и Экономика

Прогрессия в «Decorium» построена на классической для таймкиллеров модели Free-to-play (F2P), где основной мотивацией для игрока является постоянное открытие нового контента [688](#). Экономическая и прогрессионная системы тесно переплетены: игрок зарабатывает внутриигровую валюту за успешное выполнение заданий, а тратит ее на покупку новых предметов, стилей, комнат и, что особенно важно, доступа к новым, более сложным клиентам [591592](#). Этот замкнутый цикл "заработать -> купить -> достичь нового уровня" является двигателем долгосрочной вовлеченности.

Экономическая модель состоит из двух валют: 1. **Flipcoins** (Основная валюта): Получаются игроком за высокие оценки (звезды) по завершении уровня. За 5 звезд начисляется больше всего, за 1 звезду — минимально. Эта валюта используется для покупки большинства новых предметов в магазине. 2.

Diamonds (Платная валюта): Может быть получена бесплатно в основном очень медленно (например, за ежедневные бонусы или достижения), но также доступна для покупки за реальные деньги. Diamonds используются для покупки дорогих эксклюзивных предметов, быстрого открытия новых стилей или, что самое важное, для получения специальных «подсказок» от клиента, которые могут указать на конкретную проблему в комнате.

Мета-прогрессия заключается в расширении горизонтов игрока. С самого начала доступен базовый набор из 30+ предметов и 6 стилей. По мере прохождения уровней и заработка Flipcoins, игрок может открывать новые категории предметов (новые диваны, столы, лампы), новые стили (например, "Китайский антиквариат" или "Биоморфизм") и новые типы комнат (домики, квартиры в стиле лофт, кухни-студии). Но самым главным элементом прогрессии является расширение клиентской базы. После выполнения определенного числа заданий от «Новичка» игрок получает доступ к «Студенту», чьи требования чуть более строгие. Дальнейшее продвижение открывает доступ к «Профессионалу», а затем и к «Эксперту», который может ставить крайне сложные и специфические задачи, например: "Создайте пространство, доступное для людей на инвалидных колясках, соблюдая ADA-стандарты" [452453](#) или "Декорируйте комнату в стиле, который мне напоминает мой детский сад". Каждый новый клиент — это новый уровень сложности и новая возможность для обучения.

Уровневый дизайн строится на принципе плавного повышения сложности, что является ключом к удержанию игроков [682](#). Предлагается структура из 50 уровней, разделенных на три основные группы.

Уровни **1-15** (Начальный уровень): Цель — обучение. Уровни просты и понятны.

- Комната: Одна стандартная комната (гостиная или спальня).
- Предметы: Небольшой набор (5-7 предметов) из одной категории.
- Стил: Базовые стили (Скандинавский, Лофт, Модерн) с мягкими ограничениями.
- Требования: Только оценка по стилю. Требуемый балл для 5 звезд: > 0.85 .
- Пример: Задание №5. "Создайте спокойную гостиную в скандинавском стиле. Используйте только светлые тона и деревянную мебель."

Уровни **16-35** (Средний уровень): Внедрение новых механик и усложнение.

- Комната: Комната сложной формы или небольшая студия (кухня-гостиная).
- Предметы: Более крупный набор (8-12 предметов) из разных категорий.
- Стилль: Введение более сложных стилей (Прованс, Ар-деко) с более жесткими ограничениями. Появляются требования к эргономике.
- Требования: Оценка по стилю и эргономике. Требуемый балл для 5 звезд: > 0.80 .
- Пример: Задание №25. "Оформите кухню-гостиную в прованском стиле. Обязательно должно быть большое деревянное стол, несколько стульев и открытая планировка."

Уровни **36-50+** (Высокий уровень): Вызовы для опытных игроков.

- Комната: Большие и сложные пространства, возможно, с несколькими функциональными зонами.
- Предметы: Большой набор (12-15+) предметов, включая более редкие и дорогие.
- Стилль: Уникальные и сложные стили (Эко-стилль, Ювелирный стилль). Появляются многоуровневые ограничения (например, "общая доля натуральных материалов > 0.7 , но доля дерева > 0.5 ").
- Требования: Строгие требования ко всем аспектам: стилю, эргономике, балансу и бюджету. Требуемый балл для 5 звезд: > 0.75 .
- Пример: Задание №45. "Создайте уютную библиотеку в эко-стиле. Используйте только натуральные материалы. Обязательно должна быть хорошая эргономика для чтения."

Программная генерация уровней обеспечивает практически неограниченное разнообразие контента без необходимости ручной генерации каждого уровня

56. Алгоритм генерации для каждого нового уровня будет выполнять следующие шаги: 1. Выбор клиента/уровня сложности: Случайным образом выбирается уровень сложности (Новичок, Студент, Профессионал, Эксперт). 2. Выбор стилия: Из соответствующего пула стилей для данного уровня сложности выбирается один стилль. 3. Выбор набора предметов: Из общего пула предметов (≥ 30) случайным образом выбирается набор предметов, который теоретически может соответствовать выбранному стиллю. Это можно реализовать, отбирая предметы, у которых есть хотя бы один совпадающий тег со стилем. 4. Генерация ограничений: Берутся базовые ограничения для стилия и применяется вариация. Например, к пороговому значению b_i может быть добавлено

случайное число в диапазоне $[-0.1, +0.1]$. 5. Генерация параметров комнаты: Выбирается тип комнаты и ее размеры.

Такой подход, основанный на генерации на основе правил, позволяет создавать уникальные и осмысленные задачи для игрока при каждом новом старте игры ¹³⁰. Он также позволяет легко добавлять новый контент (новые стили, новые предметы) в игру через обновления, не затрагивая игровой процесс. Таким образом, экономическая, прогрессионная и уровневая системы в «Decorium» работают как единый механизм, поддерживающий интерес игрока, постепенно раскрывая ему глубину и красоту искусства дизайна интерьеров.

Интерфейс Пользователя (Интерфейс Пользователя) и Технические Требования

Интерфейс пользователя и управление в «Decorium» должны быть максимально интуитивными и адаптивными, чтобы обеспечить бесшовный игровой опыт на различных платформах, от ПК до мобильных устройств ¹¹⁷¹¹⁸. Основной задачей UI/UX является не только информирование игрока, но и создание спокойной и уютной атмосферы, соответствующей ключевым словам игры ¹⁹³.

Структура интерфейса состоит из нескольких ключевых экранов: 1. Главное меню: Простое и элегантное меню с кнопками "Новая игра", "Магазин", "Клиенты", "Настройки" и "Выход". Фон может меняться в зависимости от стиля, к которому игрок недавно имел доступ, создавая ощущение преемственности. 2. Выбор уровня: Сетка или лента с доступными уровнями. Каждый уровень представлен миниатюрной 3D-визуализацией готовой комнаты, иконкой клиента и звездным рейтингом, который был получен ранее. Недоступные уровни могут быть затемнены или закрыты замком. 3. Игровой экран: Это центральная часть игры. Он разделен на две основные части:

- Левая часть: Инвентарь с предметами. Предметы представлены в виде миниатюрных 3D-моделей. Игрок может пролистывать страницы с предметами. Выбранный предмет подсвечивается.
- Правая часть: 3D-вид комнаты. Камера должна быть свободно управляемой (вращение и приближение/отдаление), чтобы игрок мог осматривать свою работу со всех сторон.

- Верхняя панель **HUD**: Показывает текущий выбранный предмет, кнопку "Завершить" (Confirm), кнопку "Отменить" (Undo) и индикатор прогресса (например, таймер на случай, если он понадобится в будущем).

1. Экран результатов: Появляется после завершения уровня. Здесь игрок видит итоговый рейтинг в виде звезд, лепестковую диаграмму суб-оценок, полный список комментариев от клиента и кнопки "Повторить" и "Главное меню".
2. Магазин: Интерфейс для покупки нового контента. Разделен на вкладки: "Предметы", "Стили", "Клиенты". Каждый элемент имеет изображение, название, описание и цену в Flipcoins или Diamonds.

Принципы дизайна UI/UX:

- Адаптивность: Для кросс-платформенного запуска необходимо использовать адаптивный дизайн [119120](#). В Unity это реализуется с помощью компонента `Canvas Scaler` с установленным режимом "Scale With Screen Size" [486488](#). Рекомендуемая эталонная разрешение — 1280x720 [1479](#). Все элементы UI должны правильно позиционироваться и масштабироваться с использованием `Anchors` и `Pivot` [1077](#).
- Чистота и минимализм: Интерфейс не должен перегружать игрока информацией. Используются пастельные цвета, мягкие тени и читабельные, но не навязчивые шрифты. Это соответствует настроению игры и помогает сохранять спокойствие [952954](#).
- Интуитивность: Все элементы управления должны быть очевидными. Используются стандартные для платформы иконки и жесты. Например, кнопка "Купить" должна иметь вид монеты, а "Завершить" — галочку. Микрорпись на кнопках должна быть краткой и четкой [304](#).
- Визуальная обратная связь: Кнопки должны менять свой вид при нажатии (анимированный сдвиг или изменение прозрачности), а также иметь "thumb-zone" (удобную для нажатия область) на мобильных устройствах [651](#).

Управление должно быть настроено под каждую платформу:

- ПК:
- Выбор/Размещение предмета: Левый клик мыши.
- Вращение предмета: Правый клик мыши для вращения в воздухе, или использование специальных кнопок (R/Q) [291](#).
- Перемещение предмета: Перетаскивание левой кнопкой мыши.
- Вращение камеры: Перетаскивание правой кнопкой мыши.

- Приближение/Отдаление: Колесо мыши.
- Отмена действия: Клавиша `Z` или кнопка Undo в интерфейсе.
- Мобильные устройства:
- Выбор предмета: Тап по иконке в инвентаре.
- Вращение предмета: Двухпалочное движение в любом направлении.
- Перемещение предмета: Свайп вперед/назад для перемещения по горизонтали, свайп влево/вправо для вращения вокруг своей оси.
- Вращение камеры: Свайп одним пальцем для вращения вокруг оси Z, двухпалочное движение для вращения в пространстве.
- Приближение/Отдаление: Жест "увеличения" двумя пальцами.
- Отмена действия: Тап по специальной кнопке Undo.

Технические требования:

- Игровой движок: **Unity** является оптимальным выбором. Он отлично подходит для кросс-платформенной разработки (ПК, iOS, Android), имеет мощную систему UI (`UGUI`), богатую экосистему (Asset Store) и огромное сообщество разработчиков [191583](#). Unreal Engine также является сильным кандидатом, особенно для достижения высокого качества графики, но Unity чаще используется для мобильных и гиперкасальных проектов [418349](#).
- Сохранение прогресса: Прогресс игрока (открытые предметы, стили, клиенты, достижения) должен сохраняться локально на устройстве. Наиболее простой и эффективный формат для этого — **JSON** [712](#). Структура файла будет содержать объект с ключами, соответствующими состояниям игрока (например, `unlocked\_items: [101, 102, ...]`, `completed\_levels: {1: 5, 2: 4, ...}`).
- Системные требования:
- Минимальные (для мобильных): Процессор среднего класса (например, Snapdragon 7 Gen 3 [1523](#)), 3 ГБ оперативной памяти, OpenGL ES 3.0.
- Рекомендуемые (для ПК и современных мобильных): Процессор среднего/high-end класса, 4-6 ГБ оперативной памяти, видеокарта с 2-4 ГБ VRAM (например, NVIDIA GTX 1050 или эквивалент) [1201](#).
- Подключение к интернету: Не требуется. Игра полностью офлайн. Это является важным преимуществом для таймкиллеров, так как игроки могут играть в любое время и в любом месте, даже без интернета [1154](#).

Следование этим принципам дизайна и техническим рекомендациям позволит создать качественный, приятный в использовании продукт, который будет радовать игроков своим внешним видом и функциональностью.

Заключение и Рекомендации по Разработке

Представленный геймдизайн-документ (GDD) для игры «Decorium» детально описывает концепцию, механики и систему игры, основанную на уникальном подходе к оценке дизайна через многомерные векторы и линейные ограничения. Анализ показывает, что данная концепция обладает значительным потенциалом для создания интеллектуального и успокаивающего игрового опыта, которое будет выгодно отличаться от большинства других таймкиллеров на рынке. Технологическое ядро, основанное на математическом моделировании стилей и эргономики, позволяет реализовать систему обратной связи, которая не только оценивает, но и обучает игрока, превращая игровую сессию в мини-урок дизайна интерьеров. Успешная реализация этой концепции заключается в умелом балансе между сложностью этой математической модели и интуитивной, эмоционально приятной оболочкой, которую составляет пользовательский интерфейс и игровые механики.

Ключевые сильные стороны проекта: 1. Уникальная механика: Система оценки на основе векторных признаков и штрафных функций является оригинальной и глубокой, что создает прочное конкурентное преимущество [981154](#) 2.

Образовательный потенциал: Игра способна развивать у игроков чувство стиля, пространственное мышление и понимание основ эргономики, что является ценным дополнением к развлечению [701855](#). 3. Масштабируемость и бесконечность контента: Процедурная генерация уровней на основе пула предметов и стилей обеспечивает практически неограниченное разнообразие игрового процесса, что повышает долгосрочную вовлеченность [561391](#) 4. Четкая экономическая модель: F2P-экономика с прогрессией через открытие контента является проверенной и эффективной моделью для платформ таймкиллеров [688252](#)

Для успешной реализации проекта и вывода игры на рынок рекомендуется следующий план действий, основанный на лучших практиках в области разработки игр [236504](#):

Шаг 1: Создание MVP (Minimal Viable Product) Первоочередной задачей является разработка минимально жизнеспособного продукта. Это не полноценная игра, а небольшой прототип, который должен проверить ключевую

геймплейную гипотезу: "Сможет ли игрок интуитивно понять и оценить систему векторной оценки?".

- Действия:

1. Создать в Unity простую сцену с небольшой комнатой.
2. Подготовить 5-10 3D-моделей предметов с заполненными векторами признаков.
3. Реализовать базовый интерфейс: инвентарь с предметами, кнопки вращения.
4. Написать скрипт, который реализует весь алгоритм оценки: расчет векторных признаков.
5. Реализовать базовую обратную связь: подсветку предметов при нарушении

- Цель: Проверить, насколько логичны и предсказуемы результаты работы системы оценки. Собрать обратную связь от тестеров, чтобы скорректировать параметры ограничений еще до начала массовой разработки [801193](#)

Шаг 2: Разработка Core Systems После успешного прототипирования следует приступить к разработке основных систем игры.

- Действия:

1. **Создание пула предметов:** Разработать и заполнить базу данных предметами.
2. **Реализация процедурной генерации:** Написать алгоритм, генерирующий уникальные предметы.
3. **Разработка экономической модели:** Реализовать систему ресурсов и торговли.
4. **Создание уровней:** Разработать и настроить первую версию игрового мира.

Шаг 3: Продвинутая Разработка UI/UX и Cross-Platform Porting Параллельно с разработкой игровых механик необходимо сосредоточиться на пользовательском опыте.

- Действия:

1. Создать детальные макеты всех экранов интерфейса.
2. Реализовать адаптивный UI в Unity с использованием Canvas Scaler и Animate.
3. Разработать и реализовать систему управления для ПК и мобильных устройств.
4. Создать анимации и визуальные эффекты для всех элементов интерфейса (кнопки, меню, подсказки).

Шаг 4: Полировка, Тестирование и Запуск Финальный этап, направленный на доведение игры до совершенства.

- Действия:

1. Провести массовое внутреннее и внешнее тестирование для поиска багов и
2. Оптимизировать производительность игры, особенно на мобильных устройствах
3. Подготовить маркетинговые материалы (трейлеры, скриншоты).
4. Запустить игру на платформах Google Play и App Store, а также на PC (S

Следование этому плану позволит команде системно двигаться от идеи к готовому продукту, минимизируя риски и обеспечивая высокое качество конечного продукта. «Decorium» имеет все шансы стать не просто очередной таймкиллер-игрой, а культурным феноменом, популяризирующим искусство дизайна и заставляющим игроков с новым интересом смотреть на свое собственное жилое пространство.
